INDEX TO AUTHORS

A

Anderson, R. J. See *Lesuk and Anderson,* 457

Anderson, Thomas F., and **Stanley, W. M.** A study by means of the electron microscope of the reaction between tobacco mosaic virus and its antiserum, 339

—. See *Stanley and Anderson,* 325

Andrews, James C. See *Kyker, Webb, and Andrews,* 551

Artom, Camillo. Cephalins, choline-containing phospholipids, and total phospholipids in normal human plasma, 65

—. Phospholipid metabolism in denervated muscles, 953

B

Ball, Eric G. See *Tucker and Ball,* 71

Ballou, Gerald A., and **Luck, J. Murray.** The effects of different buffers on the activity of β-amylase, 233

Bazett, H. C. A modified Haldane gas analyzer for analysis of mixtures with one hundred per cent absorbable gas, 81

Beach, Eliot F., Bernstein, Samuel S., Hoffman, Olive D., Teague, D. Maxwell, and **Macy, Icie G.** Distribution of nitrogen and protein amino acids in human and in cow's milk, 57

Bergmann, Max. See *Irving, Fruton, and Bergmann,* 569

Bergmann, Max. See *Stein, Moore, and Bergmann,* 481

Berman, R. A. See *Talbot, Wolfe, MacLachlan, and Berman,* 521

Bernheim, Frederick, and **Klein, J. Raymond.** Action of sodium selenite on the oxidation of *l*-proline, 827

Bernstein, Samuel S. See *Beach, Bernstein, Hoffman, Teague, and Macy,* 57

Blix, Gunnar. On the nitrogenous constituent of cephalin, 471

Blood, Frank R., and **Lewis, Howard B.** The metabolism of sulfur. XXIX. S-Carboxymethylcysteine, 407

— and —. XXX. Thiourea, 413

Bloor, W. R. See *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* 897

Boyd, William C., Conn, John B., Gregg, Donald C., Kistiakowsky, G. B., and **Roberts, Richard M.** The heat of an antibody-antigen reaction, 787

Brooks, S. C. See *Cunningham, Kirk, and Brooks,* 11, 21

Burr, George O. See *Norris, Rusoff, Miller, and Burr,* 199

Butler, Allan M., and **Cushman, Margaret.** An ascorbic acid-like reducing substance in the buffy layer of centrifuged oxalated blood, 219

Butler, R. E. See *Isbell, Wooley, Butler, and Sebrell,* 499

Butts, Joseph S., and **Sinnhuber, Russell O.** Studies in amino acid metabolism. VI. The metabolism of *dl*-valine and *dl*-isovaline in the normal rat, 963

C

Carter, Herbert E., and **Risser, William C.** Azlactones. V. Preparation of benzoyl-α-aminocinnamic acid azlactones I and II. The use of β-phenethylamine in the purification of α-amino-β-methoxy (hydroxy) acids, 255

—, **Stevens, Carl M.,** and **Ney, Luman F.** Azlactones. IV. Synthesis of α-amino-β-thiol-*n*-butyric acids, 247

Carter, Lawrence W. See *Lough, Perilstein, Heinen, and Carter,* 487

Chaikoff, I. L. See *Perlman, Chaikoff, and Morton,* 433

—. See *Perlman, Morton, and Chaikoff,* 449

Chandler, Joseph P. See *du Vigneaud, Chandler, and Moyer,* 917

Chargaff, Erwin, Ziff, Morris, and **Moore, Dan H.** Studies on the chemistry of blood coagulation. XII. An electrophoretic study of the effect of anticoagulants on human plasma proteins, with remarks on the separation of the heparin complement, 383

—. See *Cohen and Chargaff,* 741

Cohen, Seymour S., and **Chargaff, Erwin.** Studies on the chemistry of blood coagulation. XIII. The phosphatide constituents of the thromboplastic protein from lungs, 741

Conn, John B. See *Boyd, Conn, Gregg, Kistiakowsky, and Roberts,* 787

Conner, R. T., Kao, Hsueh-Chung, and **Sherman, H. C.** Further studies on the relationship of the plane of protein intake to the rate of normal calcification during growth, 835

Coons, Albert H. See *Muus, Coons, and Salter,* 135

Craig, Lyman C., and **Jacobs, Walter A.** The veratrine alkaloids. VIII. Further studies on the selenium dehydrogenation of cevine, 263

— and —. X. The structure of cevanthridine, 293

—, —, and **Lavin, George I.** The veratrine alkaloids. IX. The nature of the hydrocarbons from the dehydrogenation of cevine, 277

Cunningham, Burris, Kirk, Paul L., and **Brooks, S. C.** Quantitative drop analysis. XIV. Potentiometric determination of chloride, 11

—, —, and —. XV. Determination of potassium, 21

—. See *Sisco, Cunningham, and Kirk,* 1

Cushman, Margaret. See *Butler and Cushman,* 219

D

Danowski, Thaddeus S. The transfer of potassium across the human blood cell membrane, 693

Darby, Hugh H. Ultraviolet absorption spectrum of papain, 721

Day, Harry G. See *Shils, Day, and McCollum,* 145

Deuel, Harry J., Jr., Halliday, Nellie, Hallman, Lois, Johnston, Cornelia, and **Miller, Albert J.** The effect of vitamin A intake on vitamin A content of butter fat, 479

DuBois, Delafield. See *Stern and Melnick,* 301

E

Elvehjem, C. A. See *Hegsted, Hier, Elvehjem, and Hart,* 863

Evans, Herbert M. See *Li, Lyons, and Evans,* 43

—. See *Tishler and Evans,* 241

F

Fazekas, Joseph F., and Himwich, Harold E. The significance of a pathway of carbohydrate breakdown not involving glycolysis, 971

Flexner, Louis B. See *Pohl and Flexner,* 163

Folch, Jordi. The isolation of phosphatidyl serine from brain cephalin, and identification of the serine component, 973

Fruton, Joseph S. See *Irving, Fruton, and Bergmann,* 569

G

Gavin, Gertrude, and **McHenry, E. W.** Inositol: a lipotropic factor, 485

—. See *Longenecker, Gavin, and McHenry,* 611

Gilligan, D. Rourke. See *Lowry, Gilligan, and Katersky,* 795

Goebel, Walther F. See *Reeves and Goebel,* 511

Gregg, Donald C. See *Boyd, Conn, Gregg, Kistiakowsky, and Roberts,* 787

Guest, George Martin. See *Rapoport, Leva, and Guest,* 621, 633

Guest, M. Mason, and **Rawson, Ruth A.** Carbohydrate storage and mobilization with changes in the blood pH, 535

—. See *McBride, Guest, and Scott,* 943

Gurin, Samuel, and **Hood, Dorothy B.** The identification and estimation of pentose in nucleic acids and nucleoproteins, 775

H

Hall, James L. Moving boundary electrophoretic study of insulin, 175

Halliday, Nellie. See *Deuel, Halliday, Hallman, Johnston, and Miller,* 479

Hallman, Lois. See *Deuel, Halliday, Hallman, Johnston, and Miller,* 479

Handler, Philip. See *Klein and Handler,* 103

Hart, E. B. See *Hegsted, Hier, Elvehjem, and Hart,* 863

Hegsted, D. Mark, Hier, S. W., Elvehjem, C. A., and **Hart, E. B.** The growth factors in cartilage for the chick, 863

Heinen, Harold J. See *Lough, Perlstein, Heinen, and Carter,* 487

Hemingway, Allan. See *Wood, Werkman, Hemingway, and Nier,* 365, 377, 483

Hier, S. W. See *Hegsted, Hier, Elvehjem, and Hart,* 863

Himwich, Harold E. See *Fazekas and Himwich,* 971

Hitchings, George H. The estimation of guanine and xanthine, 843

Hodge, Harold Carpenter, MacLachlan, P. L., Bloor, W. R., Stoneburg, Charles A., Oleson, Margaret C., and **Whitehead, Raymond.** Lipids of the fasting mouse. I. The relation between carcass lipids and liver lipids, 897

—. See *MacLachlan, Hodge, and Whitehead,* 185

Hoffman, Olive D. See *Beach, Bernstein, Hoffman, Teague, and Macy,* 57

Hood, Dorothy B. See *Gurin and Hood,* 775

Horn, Millard J., and **Jones, D. Breese.** Isolation from *Astragalus pectinatus* of a crystalline amino acid complex containing selenium and sulfur, 649
— and —. The isolation of lanthionine from human hair, chicken feathers, and lactalbumin, 473

I

Ingalls, Elizabeth N. See *Wyman and Ingalls,* 877
Irving, George W., Jr., Fruton, Joseph S., and **Bergmann, Max.** The activation of intracellular proteinases, 569
Isbell, Harris, Wooley, Jerald G., Butler, R. E., and **Sebrell, W. H.** A bacterial assay method for nicotinamide and related substances in blood, urine, and spinal fluid, 499

J

Jacobs, Walter A. See *Craig and Jacobs,* 263, 293
—. See *Craig, Jacobs, and Lavin,* 277
Jennings, Robert K. See *Weil and Jennings,* 421
Johnston, Cornelia. See *Deuel, Halliday, Hallman, Johnston, and Miller,* 479
Jones, D. Breese. See *Horn and Jones,* 473, 649

K

Kao, Hsueh-Chung. See *Conner, Kao, and Sherman,* 835
Katersky, Evelyn M. See *Lowry, Gilligan, and Katersky,* 795
Kelsey, F. E., and **Longenecker, Herbert E.** Distribution and characterization of beef plasma fatty acids, 727
Kerr, Stanley E. Notes on the preparation of muscle adenylic acid, 131
—. On the preparation of adenosine triphosphate, 121
Kirk, Paul L. See *Cunningham, Kirk, and Brooks,* 11, 21
—. See *Sisco, Cunningham, and Kirk,* 1
Kistiakowsky, G. B. See *Boyd, Conn, Gregg, Kistiakowsky, and Roberts,* 787
Klein, J. Raymond, and **Handler, Philip.** Specificity of the *d*-amino acid oxidase, 103
—. See *Bernheim and Klein,* 827
Kyker, Granvil C., Webb, Bailey D., and **Andrews, James C.** The estimation of small amounts of quinine in blood and other biological materials, 551

L

Lang, E. H. See *Reiner and Lang,* 641
Lavin, George I. See *Craig, Jacobs, and Lavin,* 277
Lee, S. B. See *Wilson, Lee, and Wyss,* 91
Lesuk, Alex, and **Anderson, R. J.** Concerning the chemical composition of *Cysticercus fasciolaris.* II. The occurrence of a cerebroside containing dihydrosphingosine and of hydrolecithin in *Cysticercus* larvae, 457
Leva, Ernst. See *Rapoport, Leva, and Guest,* 621, 633
Levy, Sylvia Ruth. See *Manly and Levy,* 35
Lewis, Howard B. See *Blood and Lewis,* 407, 413
Li, Choh Hao, Lyons, William R., and **Evans, Herbert M.** Studies on pituitary lactogenic hormone. V. Reactions with iodine, 43

Lipmann, Fritz. The oxidation of *p*-aminobenzoic acid catalyzed by peroxidase, and its inhibition by sulfanilamide, 977

Longenecker, Herbert E., Gavin, Gertrude, and **McHenry, E. W.** The relation of the vitamin B complex and liver and pancreas extracts to fat synthesis, 611

—. See *Kelsey and Longenecker,* 727

Lough, S. Allan, Perlstein, Warren L., Heinen, Harold J., and **Carter, Lawrence W.** Cystinuria. The metabolism of cystine, cysteine, methionine, homocystine, and S-carboxymethylcysteine, 487

Lowry, Oliver H., Gilligan, D. Rourke, and **Katersky, Evelyn M.** The determination of collagen and elastin in tissues, with results obtained in various normal tissues from different species, 795

Luck, J. Murray. See *Ballou and Luck,* 233

Lyons, William R. See *Li, Lyons, and Evans,* 43

M

MacLachlan, E. A. See *Talbot, Wolfe, MacLachlan, and Berman,* 521

MacLachlan, P. L., Hodge, Harold Carpenter, and **Whitehead, Raymond.** The lipids of the adrenal gland in normal and fasting rabbits, 185

—. See *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* 897

Macy, Icie G. See *Beach, Bernstein, Hoffman, Teague, and Macy,* 57

Manly, Marian LeFevre, and **Levy, Sylvia Ruth.** Effect of pregnancy on the phosphorus turnover of the skeleton of rats maintained on normal and rachitogenic diets, 35

Martin, Gustav J., Rennebaum, E. H., and **Thompson, Marvin R.** Inhibition of the conjugation of sulfanilamide, 871

McBride, J. J., Guest, M. Mason, and **Scott, E. L.** The storage of the major liver components; emphasizing the relationship of glycogen to water in the liver and the hydration of glycogen, 943

McCollum, E. V. See *Shils, Day, and McCollum,* 145

McHenry, E. W. See *Gavin and McHenry,* 485

—. See *Longenecker, Gavin, and McHenry,* 611

Melnick, Joseph L. See *Stern and Melnick,* 301

Mendive, J. R. See *Scott and Mendive,* 661

Meyer, Curtis E. See *Smith and Meyer,* 227

Miller, Albert J. See *Deuel, Halliday, Hallman, Johnston, and Miller,* 479

Miller, Elmer S. See *Norris, Rusoff, Miller, and Burr,* 199

Moore, Dan H. See *Chargaff, Ziff, and Moore,* 383

Moore, Stanford. See *Stein, Moore, and Bergmann,* 481

Morton, M. E. See *Perlman, Chaikoff, and Morton,* 433

—. See *Perlman, Morton, and Chaikoff,* 449

Moyer, A. W. See *du Vigneaud, Chandler, and Moyer,* 917

Muus, Jytte, Coons, Albert H., and **Salter, William T.** Thyroidal activity of iodinated serum albumin. IV. The effect of progressive iodination, 135

N

Ney, Luman F. See *Carter, Stevens, and Ney,* 247

Nicolet, Ben H., and **Saidel, Leo J.** The hydroxyamino acids of silk proteins, 477

— and **Shinn, Leo A.** The determination of serine by the use of periodate, 687

Nier, A. O. See *Wood, Werkman, Hemingway, and Nier,* 365, 377, 483

Norris, Frank A., Rusoff, Irving I., Miller, Elmer S., and **Burr, George O.** Fractional distillation of unsaturated fatty acids. I. The effect of vacuum distillation on the absorption spectra of polyethenoid esters from cod liver oil, 199

North, H. B. See *Pfiffner and North,* 855

O

O'Dell, Robert A. See *Zittle and O'Dell,* 753

Oleson, Margaret C. See *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* 897

P

Pass, I. J. See *Watson, Pass, and Schwartz,* 583

Pelczar, Michael J., Jr., and **Porter, J. R.** A microbiological assay technique for pantothenic acid with the use of *Proteus morganii,* 111

Perlstein, Warren L. See *Lough, Perlstein, Heinen, and Carter,* 487

Perlman, I., Chaikoff, I. L., and **Morton, M. E.** Radioactive iodine as an indicator of the metabolism of iodine. I. The turnover of iodine in the tissues of the normal animal, with particular reference to the thyroid, 433

Perlman, I., Morton, M. E., and **Chaikoff, I. L.** Radioactive iodine as an indicator of the metabolism of iodine. II. The rates of formation of thyroxine and diiodotyrosine by the intact normal thyroid gland, 449

Pfiffner, J. J., and **North, H. B.** The isolation of 17-hydroxyprogesterone from the adrenal gland, 855

Pohl, Herbert A., and **Flexner, Louis B.** Transfer of radioactive sodium across the placenta of the cat, 163

Polgár, A. See *Zechmeister and Polgár,* 193

Porter, J. R. See *Pelczar and Porter,* 111

R

Rapoport, S., Leva, Ernst, and **Guest, George Martin.** Phosphorus exchange in phytate, lipids, and nucleoproteins in the erythrocytes of geese, 633

—, —, and —. Phytase in plasma and erythrocytes of various species of vertebrates, 621

Rawson, Ruth A. See *Guest and Rawson,* 535

Reeves, Richard E., and **Goebel, Walther F.** Chemoimmunological studies on the soluble specific substance of pneumococcus. V. The structure of the Type III polysaccharide, 511

Reiner, L., and **Lang, E. H.** Insulin azo derivatives, 641

Rennebaum, E. H. See *Martin, Rennebaum, and Thompson,* 871

Risser, William C. See *Carter and Risser,* 255

Rittenberg, D. See *Waelsch and Rittenberg,* 761

Roberts, Richard M. See *Boyd, Conn, Gregg, Kistiakowsky, and Roberts,* 787

Ross, William F., and **Turner, Richard B.** The heme-globin linkage of hemoglobin. III. Analysis of the carbon monoxide product. The pancreatic digestion of several forms of hemoglobin, 603

Rusoff, Irving I. See *Norris, Rusoff, Miller, and Burr,* 199

S

Saidel, Leo J. See *Nicolet and Saidel,* 477

Salter, William T. See *Muus, Coons, and Salter,* 135

Salzburg, Peter, and **Watson, Cecil James.** A study of the supposed conversion of protoporphyrin to coproporphyrin by the liver. II. The porphyrin metabolism of rabbit liver, 593

Schwartz, Samuel. See *Watson, Pass, and Schwartz,* 583

Scott, D. A., and **Mendive, J. R.** Observations on carbonic anhydrase, 661

Scott, E. L. See *McBride, Guest, and Scott,* 943

Scudi, John V. On the colorimetric determination of vitamin B_6, 707

Sebrell, W. H. See *Isbell, Wooley, Butler, and Sebrell,* 499

Seraidarian, Krikor. See *Kerr,* 121

Sevag, M. G., Smolens, J., and **Stern, Kurt G.** Isolation and properties of pigmented heavy particles from *Streptococcus pyogenes,* 925

Sherman, H. C. See *Conner, Kao, and Sherman,* 835

Shils, Maurice E., Day, Harry G., and **McCollum, E. V.** The effect of thiamine deficiency in rats on the excretion of pyruvic acid and bisulfite-binding substances in the urine, 145

Shinn, Leo A. See *Nicolet and Shinn,* 687

Sinnhuber, Russell O. See *Butts and Sinnhuber,* 963

Sisco, Robert C., Cunningham, Burris, and **Kirk, Paul L.** Quantitative drop analysis. XIII. The formol titration of amino nitrogen, 1

Smith, Arthur H., and **Meyer, Curtis E.** The influence of thiamine deficiency on citric acid excretion, 227

Smolens, J. See *Sevag, Smolens, and Stern,* 925

Snell, Esmond E. A specific growth inhibition reversed by pantothenic acid, 975

— and **Wright, Lemuel D.** A microbiological method for the determination of nicotinic acid, 675

Ställberg, Stina. See *Stenhagen and Ställberg,* 345

Stanley, W. M., and **Anderson, Thomas F.** A study of purified viruses with the electron microscope, 325

—. See *Anderson and Stanley,* 339

Stein, William H., Moore, Stanford, and **Bergmann, Max.** The isolation of *l*-serine from silk fibroin, 481

Stenhagen, Einar, and **Ställberg, Stina.** Monolayers of compounds with branched hydrocarbon chains. IV. Phthioic acid, 345

Stern, Kurt G., and **Melnick, Joseph L.** The photochemical spectrum of the Pasteur enzyme in retina, 301

Stern, Kurt G. See *Sevag, Smolens, and Stern,* 925
Stevens, Carl M. See *Carter, Stevens, and Ney,* 247
Stokstad, E. L. R. Isolation of a nucleotide essential for the growth of *Lactobacillus casei,* 475
Stoneburg, Charles A. See *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* 897
Svensson, Harry. Fractionation of serum with ammonium sulfate and water dialysis, studied by electrophoresis, 805

T

Talbot, N. B., Wolfe, John K., MacLachlan, E. A., and **Berman, R. A.** Chromatographic separation and colorimetric determination of alcoholic and non-alcoholic 17-ketosteroids in extracts of human urine, 521
Teague, D. Maxwell. See *Beach, Bernstein, Hoffman, Teague, and Macy,* 57
Thompson, Marvin R. See *Martin, Rennebaum, and Thompson,* 871
Tishler, Max, and **Evans, Herbert M.** Vitamin E activities of some compounds related to α-tocopherol, 241
Tucker, Helen F., and **Ball, Eric G.** The activity of carbonic anhydrase in relation to the secretion and composition of pancreatic juice, 71
Turner, Richard B. See *Ross and Turner,* 603

V

Van Duyne, F. O. A method for the determination *in vitro* of riboflavin in tissues, 207
du Vigneaud, Vincent, Chandler, Joseph P., and **Moyer, A. W.** The inability of creatine and creatinine to enter into transmethylation *in vivo,* 917

W

Waelsch, Heinrich, and **Rittenberg, D.** Glutathione. I. The metabolism of glutathione studied with isotopic glycine, 761
Watson, Cecil James, Pass, I. J., and **Schwartz, Samuel.** A study of the supposed conversion of protoporphyrin to coproporphyrin by the liver. I. The fate of parenterally administered protoporphyrin in dogs with bile renal fistulae, 583
—. See *Salzburg and Watson,* 593
Webb, Bailey D. See *Kyker, Webb, and Andrews,* 551
Weil, Leopold, and **Jennings, Robert K.** Investigations in enzymatic histochemistry. III. Distribution of enzymes in rabbit kidney, 421
Weissberger, Louise Harris. Phosphorus metabolism in phlorhizin diabetes, with radioactive phosphorus as an indicator, 543
Werkman, C. H. See *Wood, Werkman, Hemingway, and Nier,* 365, 377, 483
Whitehead, Raymond. See *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* 897
—. See *MacLachlan, Hodge, and Whitehead,* 185
Wilson, P. W., Lee, S. B., and **Wyss, Orville.** Mechanism of symbiotic nitrogen fixation. V. Nature of inhibition by hydrogen, 91
Wolfe, John K. See *Talbot, Wolfe, MacLachlan, and Berman,* 521

Wood, H. G., Werkman, C. H., Hemingway, Allan, and **Nier, A. O.** Heavy carbon as a tracer in heterotrophic carbon dioxide assimilation, 365

—, —, —, and —. Mechanism of fixation of carbon dioxide in the Krebs cycle, 483

—, —, —, and —. The position of carbon dioxide carbon in succinic acid synthesized by heterotrophic bacteria, 377

Wooley, Jerald G. See *Isbell, Wooley, Butler, and Sebrell,* 499

Woolley, D. W. Identification of the mouse antialopecia factor, 29

Wright, Lemuel D. See *Snell and Wright,* 675

Wyman, Jeffries, Jr., and **Ingalls, Elizabeth N.** Interrelationships in the reactions of horse hemoglobin, 877

Wyss, Orville. See *Wilson, Lee, and Wyss,* 91

Z

Zechmeister, L., and **Polgár, A.** The carotenoid and provitamin A content of the watermelon, 193

Ziff, Morris. See *Chargaff, Ziff, and Moore,* 383

Zittle, Charles A., and **O'Dell, Robert A.** The determination of cystine: the use of cuprous oxide for simultaneous reduction and precipitation of cystine as the cuprous mercaptide, 753

INDEX TO SUBJECTS

A

Adenosine triphosphate: Preparation, *Kerr*, 121

Adenylic acid: Muscle, preparation, *Kerr*, 131

Adrenal(s): 17-Hydroxyprogesterone isolation, *Pfiffner and North*, 855

Lipids, *MacLachlan, Hodge, and Whitehead*, 185

Albumin: Blood serum, iodinated, thyroid, effect, *Muus, Coons, and Salter*, 135

Alkaloid(s): Veratrine, *Craig and Jacobs*, 263

Craig, Jacobs, and Lavin, 277

Craig and Jacobs, 293

Alopecia: Anti-, factor, mouse, *Woolley*, 29

Amino acid(s): Complex, selenium- and sulfur-containing, *Astragalus pectinatus*, isolation, *Horn and Jones*, 649

d-, oxidase, specificity, *Klein and Handler*, 103

Hydroxy-, silk proteins, *Nicolet and Saidel*, 477

Metabolism, *Butts and Sinnhuber*, 963

Milk protein, distribution, *Beach, Bernstein, Hoffman, Teague, and Macy*, 57

Aminobenzoic acid: *p-*, oxidation, peroxidase effect, *Lipmann*, 977

—, —, sulfanilamide effect, *Lipmann*, 977

Amino-β-methoxy acid(s): α-, purification, β-phenethylamine use, *Carter and Risser*, 255

Amino nitrogen: Formol drop titration, *Sisco, Cunningham, and Kirk*, 1

Amino-β-thiol-*n*-butyric acid(s): α-, synthesis, *Carter, Stevens, and Ney*, 247

Amylase: β-, buffer effects, *Ballou and Luck*, 233

Anhydrase: Carbonic, *Scott and Mendive*, 661

—, pancreatic juice secretion and composition, relation, *Tucker and Ball*, 71

Antibody: -Antigen reaction, heat, *Boyd, Conn, Gregg, Kistiakowsky, and Roberts*, 787

Anticoagulant(s): Blood plasma proteins, electrophoresis study, *Chargaff, Ziff, and Moore*, 383

Antigen: Antibody-, reaction, heat, *Boyd, Conn, Gregg, Kistiakowsky, and Roberts*, 787

Apparatus: Haldane gas analysis, modified, *Bazett*, 81

Ascorbic acid: -Like reducing substance, blood buffy layer, *Butler and Cushman*, 219

Astragalus pectinatus: Selenium-containing amino acid complex, isolation, *Horn and Jones*, 649

Sulfur-containing amino acid complex, isolation, *Horn and Jones*, 649

Azlactone(s): *Carter, Stevens, and Ney*, 247

Carter and Risser, 255

B

Bacillus: *See also Lactobacillus casei, Proteus morganii*

Bacteria: Blood nicotinamide and related substances, determination, use in, *Isbell, Wooley, Butler, and Sebrell,* 499
Spinal fluid nicotinamide and related substances, determination, use in, *Isbell, Wooley, Butler, and Sebrell,* 499
Succinic acid synthesis by, carbon position in carbon dioxide, *Wood, Werkman, Hemingway, and Nier,* 377
Urine nicotinamide and related substances, determination, use in, *Isbell, Wooley, Butler, and Sebrell,* 499
Benzoic acid: *p*-Amino-, oxidation, peroxidase effect, *Lipmann,* 977
—, —, sulfanilamide effect, *Lipmann,* 977
Benzoyl-α-aminocinnamic acid azlactone(s): Preparation, *Carter and Risser,* 255
Bile: Renal fistulae, protoporphyrin fate, relation, *Watson, Pass, and Schwartz,* 583
Bisulfite: -Binding substances, urine, thiamine effect, *Shils, Day, and McCollum,* 145
Blood: Buffy layer, ascorbic acid-like reducing substance, *Butler and Cushman,* 219
Coagulation, chemistry, *Chargaff, Ziff, and Moore,* 383
Cohen and Chargaff, 741
Hydrogen ion concentration, carbohydrate storage and mobilization, effect, *Guest and Rawson,* 535
Nicotinamide and related substances, determination, bacterial, *Isbell, Wooley, Butler, and Sebrell,* 499
Quinine determination, micro-, *Kyker, Webb, and Andrews,* 551
Blood cell(s): Potassium transfer *Danowski,* 693
Red, phytase, vertebrates, *Rapoport, Leva, and Guest,* 621
—, phytate, lipids, and nucleoproteins, phosphorus exchange, *Rapoport, Leva, and Guest,* 633
Blood plasma: Cephalins, *Artom,* 65
Fatty acids, distribution and characterization, *Kelsey and Longenecker,* 727
Heparin complement, electrophoresis study, *Chargaff, Ziff, and Moore,* 383
Phospholipids, *Artom,* 65
—, choline-containing, *Artom,* 65
Phytase, vertebrates, *Rapoport, Leva, and Guest,* 621
Proteins, anticoagulants, electrophoresis study, *Chargaff, Ziff, and Moore,* 383
Blood serum: Albumin, iodinated, thyroid, effect, *Muus, Coons, and Salter,* 135
Antiserum, tobacco mosaic virus and, reaction, electron microscope study, *Anderson and Stanley,* 339
Fractionation, ammonium sulfate and water dialysis, electrophoresis, *Svensson,* 805
Bone: *See also* Skeleton
Brain: Phosphatidyl serine isolation, *Folch,* 973
— —, serine component, identification, *Folch,* 973
Buffer(s): β-Amylase activity, effect, *Ballou and Luck,* 233
Buffy layer: Blood, ascorbic acid-like reducing substance, *Butler and Cushman,* 219
Butter fat: Vitamin A, vitamin A intake effect, *Deuel, Halliday, Hallman, Johnston, and Miller,* 479

Butyric acid(s): α-Amino-β-thiol-*n*-, synthesis, *Carter, Stevens, and Ney,* 247

C

Calcification: Growth, protein intake relation, *Conner, Kao, and Sherman,* 835

Carbohydrate: Metabolism without glycolysis, *Fazekas and Himwich,* 971

Storage and mobilization, blood hydrogen ion concentration effect, *Guest and Rawson,* 535

Carbon: Heavy, carbon dioxide assimilation, tracer, *Wood, Werkman, Hemingway, and Nier,* 365

Carbon dioxide: Assimilation, heavy carbon as tracer, *Wood, Werkman, Hemingway, and Nier,* 365

Krebs cycle, fixation mechanism, *Wood, Werkman, Hemingway, and Nier,* 483

Succinic acid, bacterial synthesis, carbon position, *Wood, Werkman, Hemingway, and Nier,* 377

Carbonic anhydrase: *Scott and Mendive,* 661

Pancreatic juice secretion and composition, relation, *Tucker and Ball,* 71

Carbon monoxide: Hemoglobin, analysis, *Ross and Turner,* 603

Carboxymethylcysteine: S-, metabolism, *Blood and Lewis,* 407

—, —, cystinuria, *Lough, Perlstein, Heinen, and Carter,* 487

Carotenoid: Watermelon, *Zechmeister and Polgár,* 193

Cartilage: Growth factors, chick, *Hegsted, Hier, Elvehjem, and Hart,* 863

Cephalin(s): Blood plasma, *Artom,* 65

Cephalin(s)—*continued:*

Nitrogenous constituents, *Blix,* 471

Cerebroside: Dihydrosphingosine-containing, *Cysticercus* larvae, *Lesuk and Anderson,* 457

Hydrolecithin-containing, *Cysticercus* larvae, *Lesuk and Anderson,* 457

Cerebrospinal fluid: Nicotinamide and related substances, determination, bacterial, *Isbell, Wooley, Butler, and Sebrell,* 499

Cevanthridine: Chemical constitution, *Craig and Jacobs,* 293

Cevine: Dehydrogenation, hydrocarbons, nature, *Craig, Jacobs, and Lavin,* 277

—, selenium, *Craig and Jacobs,* 263

Chick: Cartilage growth factors, *Hegsted, Hier, Elvehjem, and Hart,* 863

Chloride: Determination, potentiometric, *Cunningham, Kirk, and Brooks,* 11

Choline: -Containing phospholipids, blood plasma, *Artom,* 65

Cinnamic acid: Benzoyl-α-amino-, azlactones, preparation, *Carter and Risser,* 255

Citric acid: Excretion, thiamine effect, *Smith and Meyer,* 227

Cod liver oil: Esters, absorption spectra, vacuum distillation effect, *Norris, Rusoff, Miller, and Burr,* 199

Collagen: Tissues, various species, *Lowry, Gilligan, and Katersky,* 795

Coproporphyrin: Protoporphyrin conversion, liver, *Watson, Pass, and Schwartz,* 583

Salzburg and Watson, 593

Creatine: Transmethylation, *in vivo, du Vigneaud, Chandler, and Moyer,* 917

Creatinine: Transmethylation, *in vivo, du Vigneaud, Chandler, and Moyer,* 917
Cysteine: S-Carboxymethyl-, metabolism, *Blood and Lewis,* 407
—, —, cystinuria, *Lough, Perilstein, Heinen, and Carter,* 487
Metabolism, cystinuria, *Lough, Perilstein, Heinen, and Carter,* 487
Cysticercus fasciolaris: Chemistry, *Lesuk and Anderson,* 457
Larvae, cerebroside containing dihydrosphingosine and hydrolecithin, *Lesuk and Anderson,* 457
Cystine: Determination, cuprous oxide use, *Zittle and O'Dell,* 753
Homo-, metabolism, cystinuria, *Lough, Perilstein, Heinen, and Carter,* 487
Metabolism, cystinuria, *Lough, Perilstein, Heinen, and Carter,* 487
Cystinuria: S-Carboxymethylcysteine metabolism, *Lough, Perilstein, Heinen, and Carter,* 487
Cysteine metabolism, *Lough, Perilstein, Heinen, and Carter,* 487
Cystine metabolism, *Lough, Perilstein, Heinen, and Carter,* 487
Homocystine metabolism, *Lough, Perilstein, Heinen, and Carter,* 487
Methionine metabolism, *Lough, Perilstein, Heinen, and Carter,* 487

D

Diabetes: Phlorhizin, phosphorus metabolism, radioactive phosphorus as indicator, *Weissberger,* 543
Diet: Skeleton phosphorus turnover, pregnancy, effect, *Manly and Levy,* 35
Dihydrosphingosine: -Containing cerebroside, *Cysticercus* larvae, *Lesuk and Anderson,* 457
Diiodotyrosine: Thyroid formation rate, radioactive iodine as indicator, *Perlman, Morton, and Chaikoff,* 449
Drop analysis: Quantitative, *Sisco, Cunningham, and Kirk,* 1
Cunningham, Kirk, and Brooks, 11, 21

E

Elastin: Tissues, various species, *Lowry, Gilligan, and Katersky,* 795
Enzyme(s): Histochemistry, *Weil and Jennings,* 421
Kidney distribution, *Weil and Jennings,* 421
Pasteur, retina, spectrum, *Stern and Melnick,* 301
See also Amylase, Anhydrase, Oxidase, Papain, Peroxidase, Phytase, Proteinase

F

Fasting: Adrenal lipids, effect, *MacLachlan, Hodge, and Whitehead,* 185
Lipids, *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* 897
Fat: Butter. *See* Butter fat
Synthesis, liver extract relation, *Longenecker, Gavin, and McHenry,* 611
—, pancreas extract relation, *Longenecker, Gavin, and McHenry,* 611
—, vitamin B complex relation, *Longenecker, Gavin, and McHenry,* 611

Fatty acid(s): Blood plasma, distribution and characterization, *Kelsey and Longenecker,* 727
Unsaturated, distillation, fractional, *Norris, Rusoff, Miller, and Burr,* 199
Feather(s): Lanthionine isolation, *Horn and Jones,* 473
Fibroin: Silk, *l*-serine isolation, *Stein, Moore, and Bergmann,* 481

G

Gas: Analysis apparatus, modified Haldane, *Bazett,* 81
Globin: Heme-, linkage, hemoglobin, *Ross and Turner,* 603
Glutathione: *Waelsch and Rittenberg,* 761
Metabolism, isotopic glycine in study, *Waelsch and Rittenberg,* 761
Glycine: Isotopic, glutathione metabolism, study by, *Waelsch and Rittenberg,* 761
Glycogen: Liver, hydration, *McBride, Guest, and Scott,* 943
—, water relation, *McBride, Guest, and Scott,* 943
Glycolysis: Carbohydrate metabolism, relation, *Fazekas and Himwich,* 971
Growth: Calcification, protein intake relation, *Conner, Kao, and Sherman,* 835
Factor, *Lactobacillus casei,* isolation, *Stokstad,* 475
Factors, cartilage, chick, *Hegsted, Hier, Elvehjem, and Hart,* 863
Pantothenic acid effect, *Snell,* 975
Guanine: Determination, *Hitchings,* 843

H

Hair: Lanthionine isolation, *Horn and Jones,* 473
Heme: -Globin linkage, hemoglobin, *Ross and Turner,* 603
Hemoglobin: Carbon monoxide, analysis, *Ross and Turner,* 603
Heme-globin linkage, *Ross and Turner,* 603
Pancreatic digestion, *Ross and Turner,* 603
Reactions, *Wyman and Ingalls,* 877
Heparin: Complement, blood plasma, electrophoresis study, *Chargaff, Ziff, and Moore,* 383
Homocystine: Metabolism, cystinuria, *Lough, Perilstein, Heinen, and Carter,* 487
Hydrocarbon(s): Branched chain, monolayers, *Stenhagen and Ställberg,* 345
Cevine dehydrogenation, nature, *Craig, Jacobs, and Lavin,* 277
Hydrogen: Nitrogen fixation, symbiotic, effect, *Wilson, Lee, and Wyss,* 91
Hydrogen ion concentration: Blood, carbohydrate storage and mobilization, effect, *Guest and Rawson,* 535
Hydrolecithin: -Containing cerebroside, *Cysticercus* larvae, *Lesuk and Anderson,* 457
Hydroxyamino acid(s): Silk proteins, *Nicolet and Saidel,* 477
Hydroxyprogesterone: 17-, adrenals, isolation, *Pfiffner and North,* 855

I

Inositol: Lipotropic factor, *Gavin and McHenry,* 485
Insulin: Azo derivatives, *Reiner and Lang,* 641
Electrophoresis, *Hall,* 175
Iodine: Blood serum albumin addition to, thyroid effect, *Muus, Coons, and Salter,* 135

Iodine—*continued:*
Metabolism, radioactive iodine as indicator, *Perlman, Chaikoff, and Morton,* 433
Perlman, Morton, and Chaikoff, 449
Radioactive, iodine metabolism indicator, *Perlman, Chaikoff, and Morton,* 433
Perlman, Morton, and Chaikoff, 449
Thyroid, turnover, radioactive iodine as indicator, *Perlman, Chaikoff, and Morton,* 433
Tissues, turnover, radioactive iodine as indicator, *Perlman, Chaikoff, and Morton,* 433
Isovaline: *dl-*, metabolism, *Butts and Sinnhuber,* 963

K

Ketosterold(s): 17-, urine extracts, chromatographic separation and determination, colorimetric, *Talbot, Wolfe, MacLachlan, and Berman,* 521
Kidney: -Bile renal fistulae, protoporphyrin fate, relation, *Watson, Pass, and Schwartz,* 583
Enzyme distribution, *Weil and Jennings,* 421
Krebs cycle: Carbon dioxide fixation mechanism, *Wood, Werkman, Hemingway, and Nier,* 483

L

Lactalbumin: Lanthionine isolation, *Horn and Jones,* 473
Lactobacillus casei: Growth factor, isolation, *Stokstad,* 475
Lactogenic hormone: Pituitary, *Li, Lyons, and Evans,* 43
—, reactions with iodine, *Li, Lyons, and Evans,* 43
Lanthionine: Feathers, isolation, *Horn and Jones,* 473
Hair, isolation, *Horn and Jones,* 473
Lactalbumin, isolation, *Horn and Jones,* 473
Larva: *Cysticercus,* cerebroside containing dihydrosphingosine and hydrolecithin, *Lesuk and Anderson,* 457
Lecithin: Hydro-, cerebroside containing, *Cysticercus* larvae, *Lesuk and Anderson,* 457
Lipid(s): Adrenals, *MacLachlan, Hodge, and Whitehead,* 185
Blood cell, red, phosphorus exchange, *Rapoport, Leva, and Guest,* 633
Carcass and liver, relation, *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* 897
Fasting, *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* 897
Liver and carcass, relation, *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* 897
Lipotropic factor: Inositol, *Gavin and McHenry,* 485
Liver: Components, storage, *McBride, Guest, and Scott,* 943
Extract, fat synthesis, relation, *Longenecker, Gavin, and McHenry,* 611
Glycogen hydration, *McBride, Guest, and Scott,* 943
—, water relation, *McBride, Guest, and Scott,* 943
Lipids and carcass lipids, relation, *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* 897
Porphyrin metabolism, *Salzburg and Watson,* 593

Liver—*continued:*
Protoporphyrin conversion to coproporphyrin, *Watson, Pass, and Schwartz,* 583
Salzburg and Watson, 593
Water, glycogen relation, *McBride, Guest, and Scott,* 943
Lung: Protein, thromboplastic, phosphatides, blood coagulation, action, *Cohen and Chargaff,* 741

M

Methionine: Metabolism, cystinuria, *Lough, Perilstein, Heinen, and Carter,* 487
Methoxy acid(s): α-Amino-β-, purification, β-phenethylamine use, *Carter and Risser,* 255
Milk: Nitrogen distribution, *Beach, Bernstein, Hoffman, Teague, and Macy,* 57
Protein amino acids, distribution, *Beach, Bernstein, Hoffman, Teague, and Macy,* 57
Monolayer(s): Hydrocarbons, branched chain, *Stenhagen and Ställberg,* 345
Mosaic: Tobacco, virus, antiserum and, reaction, electron microscope study, *Anderson and Stanley,* 339
Mouse: Antialopecia factor, *Woolley,* 29
Muscle: Adenylic acid, preparation, *Kerr,* 131
Denervated, phospholipid metabolism, *Artom,* 953

N

Nicotinamide: Blood, determination, bacterial, *Isbell, Wooley, Butler, and Sebrell,* 499
-Related substances, blood, urine, and spinal fluid, determination, bacterial, *Isbell, Wooley, Butler, and Sebrell,* 499
Nicotinamide—*continued:*
Spinal fluid, determination, bacterial, *Isbell, Wooley, Butler, and Sebrell,* 499
Urine, determination, bacterial, *Isbell, Wooley, Butler, and Sebrell,* 499
Nicotinic acid: Determination, microbiological, *Snell and Wright,* 675
Nitrogen: Amino. *See* Amino nitrogen
Fixation, symbiotic, hydrogen effect, *Wilson, Lee, and Wyss,* 91
—, —, mechanism, *Wilson, Lee, and Wyss,* 91
Milk, distribution, *Beach, Bernstein, Hoffman, Teague, and Macy,* 57
Nitrogenous constituents: Cephalin, *Blix,* 471
Nucleic acid(s): Pentose identification and determination, *Gurin and Hood,* 775
Nucleoprotein(s): Blood cell, red, phosphorus exchange, *Rapoport, Leva, and Guest,* 633
Pentose identification and determination, *Gurin and Hood,* 775
Nucleotide: *Lactobacillus casei* growth essential, isolation, *Stokstad,* 475

O

Oil: *See also* Cod liver oil
Oxidase: *d*-Amino acid, specificity, *Klein and Handler,* 103

P

Pancreas: Extract, fat synthesis, relation, *Longenecker, Gavin, and McHenry,* 611
Hemoglobin digestion, *Ross and Turner,* 603

Pancreatic juice: Composition, carbonic anhydrase relation, *Tucker and Ball*, 71
Secretion, carbonic anhydrase relation, *Tucker and Ball*, 71
Pantothenic acid: Determination, *Proteus morganii* use, *Pelczar and Porter*, 111
Growth effect, *Snell*, 975
Papain: Ultraviolet absorption spectrum, *Darby*, 721
Pasteur enzyme: Retina, spectrum, *Stern and Melnick*, 301
Pentose: Nucleic acids, identification and determination, *Gurin and Hood*, 775
Nucleoproteins, identification and determination, *Gurin and Hood*, 775
Peroxidase: *p*-Aminobenzoic acid oxidation, effect, *Lipmann*, 977
Phenethylamine: β-, α-amino-β-methoxy acids, purification, use, *Carter and Risser*, 255
Phlorhizin: Diabetes, phosphorus metabolism, radioactive phosphorus as indicator, *Weissberger*, 543
Phosphatide(s): Lung protein, thromboplastic, blood coagulation, action, *Cohen and Chargaff*, 741
Phospholipid(s): Blood plasma, *Artom*, 65
Choline-containing, blood plasma, *Artom*, 65
Metabolism, muscle, denervated, *Artom*, 953
Phosphorus: Blood cell, red, lipids, exchange, *Rapoport, Leva, and Guest*, 633
— —, —, nucleoproteins, exchange, *Rapoport, Leva, and Guest*, 633
— —, —, phytate, exchange, *Rapoport, Leva, and Guest*, 633
Phosphorus—*continued*:
Metabolism, phlorhizin diabetes, radioactive phosphorus as indicator, *Weissberger*, 543
Radioactive, phosphorus metabolism, phlorhizin diabetes, indicator, *Weissberger*, 543
Skeleton, turnover, pregnancy, diet effect, *Manly and Levy*, 35
Phthioic acid: Monolayers, *Stenhagen and Ställberg*, 345
Phytase: Blood cell, red, vertebrates, *Rapoport, Leva, and Guest*, 621
— plasma, vertebrates, *Rapoport, Leva, and Guest*, 621
Phytate: Blood cell, red, phosphorus exchange, *Rapoport, Leva, and Guest*, 633
Pituitary: Lactogenic hormone, *Li, Lyons, and Evans*, 43
— —, reactions with iodine, *Li, Lyons, and Evans*, 43
Placenta: Sodium, radioactive, transfer, *Pohl and Flexner*, 163
Pneumococcus: Polysaccharide, Type III, chemical constitution, *Reeves and Goebel*, 511
Soluble specific substance, chemoimmunology, *Reeves and Goebel*, 511
Polysaccharide(s): Pneumococcus Type III, chemical constitution, *Reeves and Goebel*, 511
Porphyrin: Copro-, protoporphyrin conversion, liver, *Watson, Pass, and Schwartz*, 583
Salzburg and Watson, 593
Liver, metabolism, *Salzburg and Watson*, 593
Proto-, coproporphyrin conversion to, liver, *Watson, Pass, and Schwartz*, 583
Salzburg and Watson, 593
—, fate, bile renal fistulae, *Watson, Pass, and Schwartz*, 583

Potassium: Blood cell membrane, transfer, *Danowski*, 693
Determination, *Cunningham, Kirk, and Brooks*, 21
Pregnancy: Skeleton phosphorus turnover, diet effect, *Manly and Levy*, 35
Progesterone: 17-Hydroxy-, adrenals, isolation, *Pfiffner and North*, 855
Proline: *l*-, oxidation, sodium selenite effect, *Bernheim and Klein*, 827
Protein(s): Blood plasma, anticoagulants, electrophoresis study, *Chargaff, Ziff, and Moore*, 383
Growth, calcification, intake relation, *Conner, Kao, and Sherman*, 835
Lung, thromboplastic, blood coagulation, action, *Cohen and Chargaff*, 741
Milk amino acids, distribution, *Beach, Bernstein, Hoffman, Teague, and Macy*, 57
Nucleo-. *See* Nucleoprotein
Silk, hydroxyamino acids, *Nicolet and Saidel*, 477
Proteinase(s): Intracellular, activation, *Irving, Fruton, and Bergmann*, 569
Proteus morganii: Pantothenic acid determination, use, *Pelczar and Porter*, 111
Protoporphyrin: Coproporphyrin, conversion, liver, *Watson, Pass, and Schwartz*, 583
Salzburg and Watson, 593
Fate, bile renal fistulae, *Watson, Pass, and Schwartz*, 583
Provitamin: A, watermelon, *Zechmeister and Polgár*, 193
Pyruvic acid: Urine, thiamine effect, *Shils, Day, and McCollum*, 145

Q

Quinine: Biological materials, determination, micro-, *Kyker, Webb, and Andrews*, 551
Blood, determination, micro-, *Kyker, Webb, and Andrews*, 551

R

Retina: Pasteur enzyme, spectrum, *Stern and Melnick*, 301
Riboflavin: Tissue, animal, determination, *in vitro, Van Duyne*, 207
Rickets: Skeleton phosphorus turnover, pregnancy, effect, *Manly and Levy*, 35

S

Selenium: Cevine dehydrogenation, *Craig and Jacobs*, 263
-Containing amino acid complex, *Astragalus pectinatus*, isolation, *Horn and Jones*, 649
Serine: Determination, periodate use, *Nicolet and Shinn*, 687
l-, silk fibroin, isolation, *Stein, Moore, and Bergmann*, 481
Phosphatidyl, brain, isolation, *Folch*, 973
—, —, serine component identification, *Folch*, 973
Silk: Fibroin, *l*-serine isolation, *Stein, Moore, and Bergmann*, 481
Proteins, hydroxyamino acids, *Nicolet and Saidel*, 477
Skeleton: Phosphorus turnover, pregnancy, diet effect, *Manly and Levy*, 35
Sodium: Radioactive, placenta, transfer, *Pohl and Flexner*, 163
Sphingosine: Dihydro-, cerebroside containing, *Cysticercus* larvae, *Lesuk and Anderson*, 457

Steroid(s): 17-Keto-, urine, chromatographic separation and determination, colorimetric, *Talbot, Wolfe, MacLachlan, and Berman,* 521
Streptococcus pyogenes: Pigmented heavy particles, *Sevag, Smolens, and Stern,* 925
Succinic acid: Bacterium-synthesized, carbon dioxide carbon position, *Wood, Werkman, Hemingway, and Nier,* 377
Sulfanilamide: *p*-Aminobenzoic acid oxidation, effect, *Lipmann,* 977
Conjugation inhibition, *Martin, Rennebaum, and Thompson,* 871
Sulfur: -Containing amino acid complex, *Astragalus pectinatus,* isolation, *Horn and Jones,* 649
Metabolism, *Blood and Lewis,* 407, 413

T

Thiamine: Citric acid excretion, effect, *Smith and Meyer,* 227
Urine bisulfite-binding substances, effect, *Shils, Day, and McCollum,* 145
— pyruvic acid, effect, *Shils, Day, and McCollum,* 145
Thiourea: Metabolism, *Blood and Lewis,* 413
Thromboplastic protein: Lung, phosphatides, blood coagulation, action, *Cohen and Chargaff,* 741
Thyroid: Blood serum albumin, iodinated, effect, *Muus, Coons, and Salter,* 135
Diiodotyrosine formation rate, radioactive iodine as indicator, *Perlman, Morton, and Chaikoff,* 449
Iodine turnover, radioactive iodine as indicator, *Perlman, Chaikoff, and Morton,* 433
Thyroid—*continued:*
Thyroxine formation rate, radioactive iodine as indicator, *Perlman, Morton, and Chaikoff,* 449
Thyroxine: Thyroid formation rate, radioactive iodine as indicator, *Perlman, Morton, and Chaikoff,* 449
Tobacco: Mosaic virus and antiserum, reaction, electron microscope study, *Anderson and Stanley,* 339
Tocopherol: α-, related compounds, vitamin E activity, *Tishler and Evans,* 241
Tyrosine: Diiodo-, thyroid formation rate, radioactive iodine as indicator, *Perlman, Morton, and Chaikoff,* 449

U

Urea: Thio-, metabolism, *Blood and Lewis,* 413
Urine: Bisulfite-binding substance excretion, thiamine effect, *Shils, Day, and McCollum,* 145
17-Ketosteroids, chromatographic separation, *Talbot, Wolfe, MacLachlan, and Berman,* 521
—, determination, colorimetric, *Talbot, Wolfe, MacLachlan, and Berman,* 521
Nicotinamide and related substances, determination, bacterial, *Isbell, Wooley, Butler, and Sebrell,* 499
Pyruvic acid excretion, thiamine effect, *Shils, Day, and McCollum,* 145
